submissions:
closed (25 February 2024)

Message from the Guest Editor

Dear Colleagues,

It has long been known that natural and dietary compounds offer protection and affect the pathogenesis of numerous chronic diseases. Recent research evidence suggests that many chronic conditions, such as diabetes, cardiovascular diseases, and cancer, are impacted by the consumption of fruits and vegetables. Several dietary compounds act as chemopreventive and chemotherapeutic agents against various forms of cancer. In this Special Issue, we would like to highlight the effects of natural products regarding anticancer activities and their underlying mechanisms in various in vitro or in vivo models. This Special Issue of *Nutrients*, entitled “Natural Products and Cancer”, welcomes the submission of manuscripts, including either original research articles or scientific literature reviews that provide a better understanding of the effects of natural products on cancer prevention and treatment, including accounts of preclinical and clinical studies.
