Deadline for manuscript
submissions:

closed (20 September 2021)

Message from the Guest Editor

Whole grains, non-starchy vegetables, fruit, and beans are a consistent feature of diets associated with a lower risk of cancer and other diet-related diseases. Low income is a risk factor for low fruit and vegetable intake, and increasing consumption in low-income segments of the population may help to redress socioeconomic inequalities in health. Systematic reviews and meta-analyses of interventions to date find small positive effects on intake, highlighting the need for research to improve understanding of “what works” for low-income groups. In light of the lack of methods beyond traditional dietary assessment tools and techniques, there also is a need to identify novel methods to assess and track changes in intake. In light of your expertise, you are invited to submit original research (including short communications of preliminary but significant results), reviews (narrative or systematic), or meta-analyses for this Special Issue of *Nutrients* focused on innovative approaches to assessing and modifying fruit and vegetable intake in low-income populations.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Nutrition & Dietetics*) / CiteScore - Q1 (*Nutrition and Dietetics*)

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
