Nutritional Management of Gastrointestinal Dysfunction in Children

Message from the Guest Editor

Gastrointestinal dysfunctions affect many children, with a significant impact on pediatric health care. Abnormal gastrointestinal motility/function is found in children with common, less disabling conditions, such as gastroesophageal reflux and irritable bowel syndrome, and in rarer but life-impairing diseases, such as in a subgroup of children with intestinal failure (IF), including SBS and PIPO. Dietary management aims to improve nutritional status and also to minimize debilitating and potentially lethal consequences associated with failing gastrointestinal function, and it could require a complex nutritional approach. The purpose of this Special Issue is to provide new insight into the dietary management of pediatric gastrointestinal dysfunctions to help improve the care of the affected patients.

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. Nutrients adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of Nutrients has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Nutrition & Dietetics) / CiteScore - Q1 (Nutrition and Dietetics)
