Message from the Guest Editors

Dear Colleagues,

Obesity and metabolic dysfunction are major causes of severe chronic diseases, such as cardiovascular diseases and certain cancers. However, imaging studies suggest that body composition, i.e., muscle mass in relation to fat mass, visceral obesity, and ectopic fat accumulation (e.g., in the liver, pancreas, or kidney), are much more strongly predictive of metabolic diseases than obesity defined by anthropometric measures like the BMI. Thus, we will focus on new insights into the interplay between nutritional factors, obesity, body composition, and metabolic dysfunction in this Special Issue of *Nutrients*.

Dr. Tilman Kuehn

Special Issue

an Open Access Journal by MDPI

Editors-in-Chief

Prof. Dr. Lluís Serra-Majem

1. Centro de Investigación Biomédica en Red Fisiopatología de la Obesidad y la Nutrición (CIBEROBN), Institute of Health Carlos III, 28029 Madrid, Spain
2. Research Institute of Biomedical and Health Sciences (IUIBS), University of Las Palmas de Gran Canaria, 35001 Las Palmas, Spain
3. Preventive Medicine Service, Centro Hospitalario Universitario Insular Materno Infantil (CHUIMI), Canarian Health Service, 35016 Las Palmas, Spain

Prof. Dr. Maria Luz Fernandez

Department of Nutritional Sciences, University of Connecticut, Storrs, CT 06269, USA

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Nutrition and Dietetics) / CiteScore - Q1 (Food Science)
