## Nutrition Challenges for Middle-Aged and Older Women

Guest Editor:

**Prof. Masakazu Terauchi**

Department of Women's Health,  
Tokyo Medical and Dental  
University, Tokyo, Japan

Deadline for manuscript  
submissions:

**closed (30 April 2021)**

### Message from the Guest Editor

During the menopausal transition and postmenopausal periods, women are affected by a variety of symptoms, such as hot flashes, night sweats, vaginal dryness, depression, anxiety, and insomnia. Non-specific somatic symptoms are also common, including muscle and joint pain, tiredness, and dizziness. Some of these effects (particularly vasomotor symptoms and vaginal atrophy) are closely associated with estrogen deficiency, but the exact mechanisms underlying the other symptoms are not fully understood.

Postmenopausal women are also at increased risk of cardiovascular morbidity as a net effect of central obesity, dyslipidemia, hypertension, and diabetes, as well as for osteoporosis, cognitive decline, and genitourinary syndrome of menopause.

In this Special Issue of *Nutrients*, we would like to bring together manuscripts dealing with the topic of “Nutrition Challenges for Middle-Aged and Older Women”. Topics may include dietary interventions with foods, altered nutrient intake or food supplements, and specific dietary pattern interventions, such as the Mediterranean Diet or calorie restriction, in humans.
