Message from the Guest Editors

Dear Colleagues,

In the last century, the average life expectancy at birth increased from roughly 45 years in the early 1900s to more than 80 years today. However, living longer is often related to different levels of frailty. There is no curative treatment for frailty—the interventions that have been described as effective to slow or delay the onset of frailty are physical activity and nutritional interventions. Maintaining adequate nutrition status is important to reduce the risk of chronic diseases, many of which are age-related. On the other hand, frailty itself may have a negative effect on eating and, thus, on the nutritional status.

We invite you and your collaborators to consider the submission of your original research, protocol development, and methodological studies, narrative or systematic reviews, and meta-analyses. To better understand these complex relationships, we welcome all types of study designs in various populations, including large observational epidemiological studies, systematic reviews and meta-analyses, clinical and field trials, and qualitative investigations.

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. Nutrients adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of Nutrients has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Author Benefits

Open Access: — free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, AGRICOLA, AGRIS, and many other databases.

Journal Rank: JCR - Q1 (Nutrition & Dietetics) / CiteScore - Q1 (Food Science)
