Department of Biomedical Science and Human Oncology, Section of Neonatology and Neonatal Intensive Care Unit, University of Bari "Aldo Moro", 70100 Bari. Italy

Deadline for manuscript submissions:

closed (15 April 2023)

# **Message from the Guest Editors**

Nutrition for "critical" infants represents a real challenge, both in NICU settings and thereafter. One of the most significant issues is the development of the so-called "extrauterine growth retardation" of ELBW newborns. There are many unanswered questions regarding its management, newborns' catch-up growth, and long-term effects. Optimal nutritional management is also a significant problem in newborns with intrauterine growth retardation, sepsis, surgical conditions, perinatal asphyxia, etc., all of which are characterized by an"acute stress response" aimed at restoring homeostasis. Recently, gender-based differences in neonatology and many other medical specialties have also been studied. They represent a promising approach for research and possible clinical applications. However, use of parenteral and enteral intakes varies widely, with a range of different approaches.

This Special Issue will explore the different effects of nutrition in fragile neonates and children. We welcome the original research articles and reviews.

# Message from the Editorial Board

*Nutrients* is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
