Services, Evangelismos General  
Hospital, National and  
Kapodistrian University of  
Athens, 11527 Athens, Greece

Deadline for manuscript  
submissions:

**closed (25 October 2021)**

### Message from the Guest Editors

Dear Colleagues,

Nowadays, medical nutrition therapy of critically ill patients is an indispensable element of holistic intensive care therapy but remains also a challenge. Proper planning of nutrition support, taking into account the appropriate route of administration, as well as estimating energy and nutritional needs can significantly improve the patient's prognosis and outcomes, especially during COVID-19 pandemic, which has posed a huge healthcare, social and economic impact worldwide during the past few months. Most of the published guidelines from various international organizations state that there is an urgent need regarding data on optimal nutritional approach for critically ill patients.

Therefore, we would like to invite authors to contribute original research articles as well as review articles focused on malnutrition risk, diagnosis and medical nutrition treatment in critically ill and COVID-19 patient and their impact on clinical outcomes in everyday clinical setting.
