Message from the Guest Editor

Dear Colleagues,

We are very pleased to announce our proposal for a Special Issue on “Nutritional Management for Chronic Liver Disease”. Numerous studies have indicated that the assessment of a patient’s nutritional status is essential for the management of chronic liver disease (CLD), including nonalcoholic fatty liver disease (NAFLD) and liver cirrhosis. Nutritional factors such as macro- and micronutrients have also been shown to be involved in the development of CLD, including impaired glucose tolerance, dyslipidemia, sarcopenia, and hepatic encephalopathy. Dietary intake imbalance has been demonstrated to be associated with the development of hepatocarcinogenesis.

This Special Issue will highlight the current insights regarding nutritional assessments for CLD, including NAFLD, liver cirrhosis, and liver cancers, and CLD-related metabolic abnormalities. These insights include novel target molecules or genes and genetic polymorphisms that may be involved in nutritional status in CLD or CLD-related metabolic abnormalities.

We look forward to the submission of many interesting and attractive manuscripts to this Special Issue.
