Chemical Diagnostics, Medical
University of Graz, Graz, Austria

Deadline for manuscript
submissions:

closed (16 March 2023)

Message from the Guest Editor

Dear Colleagues,

This Special Issue will address new basic and clinical research data of obesity- and dyslipidemia-related pathologic sequelae. Obesity and dyslipidemia are responsible for the increasing burden of chronic diseases in the industrialized world. Sessile lifestyle, ingestion of highly processed food, and individual genetic risk constellations contribute to cardiovascular, hepatic, cerebrovascular, and oncologic diseases, all of which are killers number one. A better understanding of risk factors will save lives. The coronavirus pandemic has indeed shown that metabolic and immunologic dysfunction associated with obesity and diabetes mellitus contributes to fatal courses of COVID-19. This issue cordially invites all researchers working with such pathologic sequelae of obesity to submit reviews and original research manuscripts to this Special Issue.
