### Message from the Guest Editors

Exploring novel sources of natural polyphenols and deep investigations on polyphenol-based nutritional interventions can provide single/multiple omics approaches to obtain and comprehensively understand potential mechanisms of action. Integrating “omics” techniques into polyphenols-related studies enables researchers to more adequately connect food and diet with health and diseases. Furthermore, we also noticed that there has also been a rapid growth in the wide applications of foodomics technologies for investigating the beneficial activities of polyphenols on human health, nutrition, and well-being.

In this Special Issue of *Nutrients*, we would like to invite authors to submit original manuscripts with the scope of the proposed topics. Submissions of original research; reviews of current scientific literature, including systematic reviews and meta-analyses; and short reports are welcomed.
