Message from the Guest Editors

Dear Colleagues,

Adequate vitamin D is essential to human health. More recently, the focus has returned to the well-accepted requirement of vitamin D for bone health, as clinical trials do not demonstrate major benefits of vitamin D supplementation for amelioration of a range of non-bone disease outcomes. However, deficits in the design of clinical trials to date – particularly that the participants have not been vitamin D deficient at baseline – mean that there is still some doubt about links between vitamin D and many health outcomes. This Special Issue will explore the most recent research and critically evaluate the evidence.

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. Nutrients adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of Nutrients has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases. Full-text available in PubMed Central.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 14.2 days after submission; acceptance to publication is undertaken in 4.4 days (median values for papers published in this journal in the second half of 2018).
