Nutritional Supplements for Bone Health

Message from the Guest Editor

Bone health is of great importance to our daily activities and is maintained using multiple nutrients under a complicated regulatory system. Nutritional supplements are developed and utilized to keep and improve our bone health under pathological status or during specific life stages. In this context, there are many issues to address. Numerous studies have focused on this topic to help improve the supplement usage strategy. We organized this Special Issue aiming to collect and spread the most current and valuable data on this topic, which we believe will eventually boost the general bone health of the public. We are enthusiastic about your original research, no matter whether it is population-based or animal-based, in vivo or in vitro, and clinical or basic. Meanwhile, we also welcome meta-analyses and reviews in which up-to-date summaries and informative results are provided. Any other opinions from experts on this topic are more than welcome.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
