The Role of Nutrition in Gynecological Diseases

Message from the Guest Editor

Gynecological diseases are a group of diseases of the female reproductive tract. These diseases include benign and malignant tumors and pregnancy-related, inflammatory and endocrine diseases that can occur in the female reproductive system, including the cervix, ovaries, uterus, vagina and vulva. There are different risk factors and etiological mechanisms involved in the development of gynecological diseases. Numerous studies have shown that nutritional factors and dietary habits play a significant role in the development of gynecological diseases. Therefore, the exploration of effective chemopreventive and therapeutic approaches to gynecological diseases is critically important for women's welfare. This Specific Issue, "The Role of Nutrition in Gynecological Diseases", will focus on advances in our understanding of the association between nutrition, dietary habits/interventions and gynecological diseases and will discuss how nutrition and dietary intervention can help to improve disease prevention and treatment efficacy in major gynecological diseases.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Editors-in-Chief

Prof. Dr. Lluís Serra-Majem
