Special Issue

Enhancement of Muscle Mass and Function by Nutritional Supplementation in the Older Population

Message from the Guest Editor

This special nutrition issue, titled "Enhancement of muscle mass and function by nutritional supplementation in the older population" welcomes submissions reporting original research or reviewing the scientific literature. The loss of muscle mass and function associated with aging is a continuing concern, and factors contributing to its development have been identified. These factors include lost alpha motor neurons, increased pro-inflammatory cytokines, decreased physical activity, and decreased androgen and estrogen levels. Moreover, insufficient food intake may also be a major factor. Therefore, nutritional interventions may play an important role in the improvement of muscle mass and performance in older adults. We would like to summarize and review the effects of nutritional intervention and types of nutritional supplements on muscle mass and function, as well as metabolism, in older adults.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. Nutrients adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of Nutrients has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Editors-in-Chief

Prof. Dr. Lluis Serra-Majem

- Centro de Investigación Biomédica en Red Fisiopatología de la Obesidad y la Nutrición (CIBEROBN), Institute of Health Carlos III, 28029 Madrid, Spain
- Research Institute of Biomedical and Health Sciences (IUIBS),
 University of Las Palmas de Gran Canaria, 35001 Las Palmas, Spain
 Preventive Medicine Service, Centro Hospitalario Universitario
 Insular Materno Infantil (CHUIMI), Canarian Health Service, 35016 Las Palmas, Spain
