Special Issue

Nutritional Management and Intervention for Breast Cancer

Message from the Guest Editor

This Special Issue seeks to highlight advances in personalized dietary interventions, nutrigenomics, nutritional biomarkers, gut microbiome and metabolomics-driven approaches that can enhance prevention strategies, improve treatment outcomes, and reduce the risk of recurrence. We encourage submissions that address how nutritional science can be tailored to specific subtypes of breast cancer, hormonal status, and patient profiles across diverse populations. The scope of this Special Issue includes, but is not limited to, the following topics:

- Nutrigenomics and nutrigenetics in breast cancer susceptibility and progression;
- Dietary modulation of the tumor microenvironment;
- Role of specific nutrients, phytochemicals, and dietary patterns in breast cancer prevention;
- Interactions between diet, the gut microbiome, and immune response in breast cancer patients;
- Precision nutrition in survivorship and quality of life improvement;
- Clinical trials and translational studies on nutritional interventions:
- Nutrition-guided management of treatment side effects;
- Integrating digital tools and AI for personalized dietary planning in oncology.
