

Special Issue

Hot Topics in Clinical Nutrition (3rd Edition)

Message from the Guest Editors

Following the success of the two previous Special Issues of collections of papers focusing on "Hot Topics in Clinical Nutrition", we would like to arrange another platform for scientific contributions on the matter, in order to showcase new breakthrough articles in clinical nutrition science. This Special Issue maintains the same editorial line as the previous two. The modulation of gut microbiota and related health issues, such as metabolic, inflammatory, and neoplastic diseases, and the impact of novel foods (including artificial foods) as well as additive and processed foods on human health are arguments of interest. Moreover, articles debating the role of nutritional support in disease-related malnutrition (due to cancer or acute and chronic inflammation) and perioperative nutrition are welcomed, as are manuscripts concerning the role of food waste (and environmental consequences) and strategies to deal with it. Original studies as well as meta-analyses/systematic reviews or well-prepared narratives are welcomed.
