

Special Issue

Coffee and Caffeine Consumption for Human Health

Message from the Guest Editor

Dear colleagues, Caffeine is naturally present in the leaves and seeds of different plants, and it has been traditionally used to improve mental alertness and wakefulness by using brews of these plants. Alongside the appearance of new forms of caffeine intake in our modern society, positive applications of both acute and long-term ingestion of caffeine have increased, while the effects of caffeine on cardiovascular, respiratory, thermoregulatory, and metabolic systems are well-understood at present. You are invited to submit a manuscript to this special issue in *Nutrients*, one of the most read and cited research journals in “Nutrition and Dietetics”. The goal of this Special Issue is to provide new evidence of the effects of caffeine intake (especially, but not limited to, coffee consumption) on different aspects of human health. We welcome manuscripts related to original research articles, systematic reviews, meta-analyses, and opinions related to the effects of caffeine on health outcomes. Garrigós

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
