Special Issue

Nutrition and Lifestyle Intervention for Obese Adolescents

Message from the Guest Editor

Globally, the promotion of healthy nutrition and regular physical activity in youths constitutes one of the greatest public health challenges of the 21st century. Poor diet and sedentary behaviors in youth are associated with more chronic diseases. Research has shown that lower consumption of fruits, dairy, and whole grains in youth may worsen as children grow older. Furthermore, poor nutrition is associated with greater fluctuations in mood, depression, and longer recovery from illness. Therefore, it is critically important to gain scientific knowledge about proper nutrition and active lifestyle behaviors early on in youth. Although quality nutrition and regular physical activity are strongly associated with a reduction in chronic diseases, many individuals are unwilling or unable to follow sound practices. Subsequently, overweight and obesity in youth are at an all time high. The purpose of this Special Issue is to bring together a select group of experts who can address effective interventions/strategies for optimizing best nutrition and/or exercise practices for overweight or obese youths.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. Nutrients adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of Nutrients has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Editors-in-Chief

Prof. Dr. Lluis Serra-Majem

- Centro de Investigación Biomédica en Red Fisiopatología de la Obesidad y la Nutrición (CIBEROBN), Institute of Health Carlos III, 28029 Madrid, Spain
