Dietary Modulation of Chronic Pain: From Pathogenesis to Clinical Treatment

Message from the Guest Editor

We invite submissions of original basic, clinical, epidemiological, and translational research manuscripts that explore the intersection of nutrition and chronic pain. This Special Issue aims to advance the understanding of how dietary interventions, nutritional status, and metabolic pathways influence the onset, persistence, and management of chronic pain conditions. We welcome interdisciplinary studies that bridge basic science and clinical application, including work on epigenetics, biomarkers, gut-brain interactions, dietary supplements, and lifestyle-based nutritional strategies. Both human and preclinical studies with clear translational relevance are encouraged.
