

## Special Issue

# Impact of Front of Pack Nutrition Label on Nutritional Behavior

### Message from the Guest Editor

The development of nutritional policies plays a vital role in health promotion at a population level, and several methods have been proposed for the improvement of nutritional knowledge as a means to decrease dietary risk factors, including nutrition behavior.

With respect to nutritional labeling, the food industry and food authorities have proposed various schemes, all with their advantages and disadvantages. Relatively recently, front of pack labeling has received attention, as one nutritional policy that will reduce nutrition-related diseases. The goal is to help consumers to make informed decisions on the healthiness of the product they purchase.

This Special Issue of *Nutrients* welcomes research papers and review articles in this area, with an aim to display the current research activity on the area of front of pack nutrition labels (FOPNLs) and contribute to the discussion of this particular initiative for the promotion of public health.

## About the Journal

### Message from the Editorial Board

*Nutrients* is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
