Nutrition Intervention on Supportive Cares for Cancer Patients

Message from the Guest Editor

We are organizing a Special Issue to clarify the role of diet and nutrition in advanced cancer prevention, treatment, and survivorship. Cancer is a worldwide public health concern. The accelerating aging of the population and increasingly unbalanced diet increase the risk of cancer to some extent. At the same time, more and more young people are developing cancer due to unhealthy diet and lifestyles. Malnutrition or overnutrition negatively impacts the efficacy of cancer treatment. As a result of improved outcomes for cancer patients, increased focus has been placed on how to manage cancer survivors, including the roles of diet and nutrition. In this Special Issue, we invite researchers to submit papers on nutritional strategies for advanced cancer management. We welcome original research articles and animal and clinical studies, as well as review articles.
