Dietary Patterns: Do Children with Neurodevelopmental Disorders Eat Differently?

Message from the Guest Editors

The relationship between nutrition and neurodevelopmental disorders is of great importance in childhood and presents several possibilities for research. Eating disorders are mainly characterized by atypical eating behaviors, associated emotional and cognitive alterations, and dysregulated body weight. Atypical eating behaviors are especially common in children with neurodevelopmental disorders, possibly due to sensory processing alterations. We encourage all researchers involved in the world of neurodevelopmental disorders (occupational therapists, nutritionists, nurses, psychologists, physicians, and epidemiologists) to submit their research to this Special Issue and shed light on this unknown, interesting, and relevant topic. We welcome related original research articles, clinical studies, and review articles that focus on nutrition, diet, eating behaviors, and/or routines around food in relation to neurodevelopmental childhood disorders, as well as dietary evaluations in children with neurodevelopmental disorders. Thank you for considering this Special Issue as an outlet for your research on dietary patterns in children with neurodevelopmental disorders.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Editors-in-Chief

Prof. Dr. Lluís Serra-Majem

1. Centro de Investigación Biomédica en Red Fisiopatología de la Obesidad y la Nutrición (CIBEROBN), Institute of Health Carlos III, 28029 Madrid, Spain
