Special Issue

Role of Vitamin D in Chronic Diseases—2nd Edition

Message from the Guest Editor

Chronic diseases such as respiratory disease, cardiovascular disease, cancer and diabetes cause 57% of all deaths globally. Chronic conditions can result in a variety of adverse health effects, such as depression and disability, can have an impact on wellbeing, and can also be costly. Vitamin D deficiency has been found to be associated with common chronic diseases such as bone metabolic disorders, cardiovascular disease, cancer and diabetes. Thus, the role and effect of vitamin D should be further explored. Studying risk factors based on vitamin D intake and metabolism may lead to novel and timely interventions. Considering the success of the previous Special Issue. entitled "Role of Vitamin D in Chronic Diseases", we are pleased to announce that we are launching a second Special Issue on this topic. The objective of this Special Issue is to publish reviews, clinical trials or experimental studies that focus on the role of vitamin D in chronic diseases. Your expert contributions to this Special Issue of *Nutrients* are highly appreciated.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. Nutrients adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of Nutrients has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Editors-in-Chief

Prof. Dr. Lluis Serra-Majem

- Centro de Investigación Biomédica en Red Fisiopatología de la Obesidad y la Nutrición (CIBEROBN), Institute of Health Carlos III, 28029 Madrid, Spain
- Research Institute of Biomedical and Health Sciences (IUIBS),
