The Role of Triglycerides and Triglyceride Metabolism in Human Health

Message from the Guest Editors

There is accumulating evidence that elevated plasma triglyceride levels are a risk factor for cardiovascular and cerebrovascular disorders including stroke, and for metabolic diseases such as diabetes.

The *Nutrients* Special Issue titled “The Role of Triglycerides and Triglyceride Metabolism in Human Health” seeks to provide contemporary consideration of how the metabolism of triglycerides and of triglyceride-rich lipoproteins contributes to human health, especially the etiology of vascular-based disorders. The Special Issue seeks to include, but to also expand knowledge beyond, cardiovascular disease and atherosclerosis. Submissions with a focus on cerebrovascular and neurodegenerative disorders, peripheral vascular disease, as well as metabolic and/or endocrine dysfunction are strongly encouraged.

We hope you find this Special Issue “The Role of Triglycerides and Triglyceride Metabolism in Human Health” to be timely, and appreciate your positive consideration to submit.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Editors-in-Chief

Prof. Dr. Lluís Serra-Majem
