Special Issue

Dose-Response Relationships of Vitamin D Status and Vitamin D Intake with Health Outcomes

Message from the Guest Editor

Numerous observational and intervention studies have suggested adverse health effects of poor vitamin D status and health benefits of vitamin D intake. However, results have often been inconsistent. Plausible major explanations for such inconsistency include heterogeneity in consideration of dose-response relationships in observational studies and of the target populations and dosing schemes in intervention studies. The goal of this Special Issue, "Dose-Response Relationships of Vitamin D Status and Vitamin D Intake with Health Outcomes", is to contribute to a better understanding of health effects of vitamin D status and vitamin D intake by paying adequate attention to specific dose-response relationships of vitamin D status and vitamin D intake with a variety of health outcomes, including incidence and mortality of major acute and chronic diseases.

About the Journal

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peerreview and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.

Editors-in-Chief

Prof. Dr. Lluis Serra-Majem

1. Centro de Investigación Biomédica en Red Fisiopatología de la Obesidad y la Nutrición (CIBEROBN), Institute of Health Carlos III, 28029 Madrid, Spain

 Research Institute of Biomedical and Health Sciences (IUIBS), University of Las Palmas de Gran Canaria, 35001 Las Palmas, Spain
Preventive Medicine Service, Centro Hospitalario Universitario Insular Materno Infantil (CHUIMI), Canarian Health Service, 35016 Las Palmas, Spain

Prof. Dr. Maria Luz Fernandez
