

Special Issue

Parenteral Nutrition 2016

Message from the Guest Editors

This Special Issue of *Nutrients* will include a variety of topical discussions related to current research and practice as they relate to Parenteral Nutrition (PN). It will include a discussion of the components of PN, including both macronutrients and micronutrients. It will review the use of PN in unique patient populations, such as the critically ill, and in pediatrics. It will also provide insight into optimizing the benefits of PN and minimizing the risks of PN from the perspective of the value of using pre-mx solutions vs. compounded, a discussion of catheter related blood stream infections and a discussion of other complications of PN including metabolic bone disease and PN associated liver disease (PNALD).
