Special Issue

Obesity in the 21st Century: Public Health Perspectives and Population Solutions

Message from the Guest Editors

Obesity is one of the most pressing global public health challenges of the 21st century. Its rapid rise across both high- and low-income countries is driven by complex, interrelated factors including urbanization, sedentary lifestyles, dietary transitions, socioeconomic disparities, and environmental influences. As obesity continues to fuel a cascade of chronic diseases such as type 2 diabetes, cardiovascular diseases, certain cancers, and musculoskeletal disorders, there is an urgent need for population-level, systems-oriented solutions. This Special Issue seeks to provide a platform for original research and review articles that examine the population health implications of obesity and propose multilevel strategies for prevention, management, and policy response. We invite researchers, practitioners, and policymakers to contribute evidence that informs action and translates knowledge into meaningful population health outcomes. We welcome high-quality original research, systematic reviews, meta-analyses, commentaries, and perspectives that contribute to a deeper understanding of obesity burden and offer practical or policy-oriented solutions.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Nobuyuki Takahashi

Laboratory of Physiology and Metabolism, Department of Food Safety and Nutritional Science, Faculty of Applied Bioscience, Tokyo University of Agriculture, Tokyo, Japan

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 13.4 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
