

Special Issue

Otorhinolaryngological Advancements in Phoniatics

Message from the Guest Editors

Voice disorder is an important issue in the quality-of-life era for both patients and the clinicians who provide care for them, which include otorhinolaryngologists, speech-language pathologists, internists, surgeons, anesthesiologists, family physicians, radiologists, other primary care providers, nurses, etc. In this Special Issue, we focus on the advancements in phoniatics including anatomy, screening, diagnosis, treatment, rehabilitation and prognosis. In addition, how these advancements improve the clinical practice of caring for patients with voice disorders is also of interest. We welcome up-to-date technologies in phoniatics, as well as research topics including:

- Voice issues before and after head and neck surgery, thyroidectomy and parathyroidectomy;
- Electrophysiological change of laryngeal nerves and muscles in patients with voice disorder;
- Voice intervention techniques, such as speech therapy and injection laryngoplasty;
- Integration with other technologies, such as swallowing assessment, ultrasound-guided interventions, etc.;
- Latest advancements in artificial intelligence, machine learning, programming electrical stimulation

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Agnieszka Szczepek

Department of Otorhinolaryngology, Head and Neck Surgery, Charité
Universitätsmedizin, Berlin, Germany

Author Benefits

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.5 days after submission; acceptance to publication is undertaken in 3.2 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
