Sensorineural Hearing Loss

Message from the Guest Editor

Sensorineural hearing loss (SHL) is a very common disorder that affects more than 10% of the global population. Sensorineural hearing loss affects people of all ages, from newborn children to the elderly; SHL can delay or entirely inhibit language development in children, and in adults, it can lead to withdrawal from society—drastically decreasing quality of life. Universal newborn hearing screening, genetic research improvement, hearing aids and cochlear/auditory brainstem implantation have shed the light on the field; however, much more research and information are still required to better help SHL patients. Thus, I would like to invite you to contribute your excellent research to the Journal of Otorhinolaryngology, Hearing and Balance Medicine.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Agnieszka Szczepek

Department of Otorhinolaryngology, Head and Neck Surgery, Charité
Universitätsmedizin, Berlin, Germany

Author Benefits

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 29.5 days after submission; acceptance to publication is undertaken in 3.2 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
