Message from the Guest Editor

Dear Colleagues,

A new era of cancer therapeutic modalities, including immunotherapies and targeted therapies, has led to a paradigm shift in cancer treatment, inducing effective and durable clinical responses for a significant number of patients suffering from various types of malignancy. Combinatorial treatments, including immune checkpoint inhibitors, adoptive cellular therapies, molecular targeted therapies, and cancer vaccines have overcome cancer heterogeneity, inducing resistance mechanisms, and thus reinforcing the impact of these novel cancer therapeutic approaches. The 9th Symposium on Advances in Cancer Immunology and Immunotherapy, which will be held on November 30–December 2 2023 in Athens, plans to address multidisciplinary issues related to cancer immunology and immunotherapy spanning basic and translational research with the ultimate aim to design the most effective cancer therapeutic strategies. The conference will feature world-renowned oncologists and researchers, who will provide their insights on the above topics, in an effort to enhance our understanding of tumor evolution and design-enhanced treatment strategies.
