The Importance of Early Interceptive Orthodontic Treatments

Message from the Guest Editor

Early interceptive orthodontics is an efficient approach which can reduce the severity of a developing malocclusion, the complexity of the overall orthodontic treatment, and at the same time can reduce time and costs of the therapy. Intercepting a malocclusion in the developing dentition can promote favorable developmental changes in craniofacial growth and reduce the need or the severity of orthognathic surgery. It could also have psychosocial benefits in terms of an improved dental and face appearance during early teenage years.

About the Journal

Message from the Editor-in-Chief

Oral is an official, peer-reviewed publication from MDPI, which deals with the key issues of oral health and its related fields. It allows for the dissemination of scientific research focused on emerging problems in the fields of dentistry and oral health, providing a forum to promote scientific information. Indeed, the need to face emerging problems, such as the progressive aging of the population and the impact of technological progress on healthcare, represents some pillars on which to build novel therapeutic strategies in the field of dentistry. *Oral* provides a great opportunity to contribute to progress in the field of oral health through the distribution of high-quality articles

Editor-in-Chief

Prof. Dr. Giuseppina Campisi

Department of Rehabilitation, Fragility and Continuity of Care, Unit of Oral Medicine, University Hospital Palermo, 90127 Palermo, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.3 days after submission; acceptance to publication is undertaken in 9.9 days (median values for papers published in this journal in the first half of 2025).
