

Special Issue

Advanced and Green Synthetic Methodologies in Organic Chemistry

Message from the Guest Editor

In most synthetic methodologies, green and sustainable pathways are involved, with tremendous developments based on their mildness and high compatibility with functional groups without the use of protecting groups and within green media. Moreover, one-pot pathways, flow conditions, and MCR procedures are the most common and suitable processes for the synthesis of the core of heterocyclic molecules and natural products with limited steps and in the context of green and sustainable chemistry. In this Special Issue on “Advanced and Green Synthetic Methodologies in Organic Chemistry”, a series of original contributions made by leading experts in the field is expected to highlight recent advances and future perspectives on this emerging topic. These research articles are intended to cover various aspects of green approaches, MCR procedures, and catalytic methodologies, as well as theoretical study and applications, in a diverse range of reactions ranging from the synthesis of natural and pharmaceutical products to water treatment and the medicinal area and to new organic transformations.

About the Journal

Message from the Editor-in-Chief

Organics is a new open-access journal that offers rapid dissemination of innovative, informative, and impactful results in every aspect of organic chemistry, with a particular emphasis on new or significantly improved research results in the field of organic chemistry. The aim of this journal is to encourage scientists to publish their experimental and theoretical results in great detail to facilitate the advancement of organic chemistry. Sample research topics that span the journal's scope are organic synthesis, synthetic methodology, theoretical organic chemistry, physical organic chemistry, supramolecular and macromolecular chemistry, heterocyclic chemistry, organocatalysis, bioorganic chemistry, organometallic chemistry, functional organic materials, etc. We are flexible with the types of manuscripts accepted, including original research articles, short communications, highlights of new developments and insightful critical reviews.

Editor-in-Chief

Prof. Dr. Wim Dehaen

Molecular Design and Synthesis, Department of Chemistry, KU Leuven,
Leuven Chem&Tech, Celestijnenlaan 200F, B-3001 Leuven, Belgium

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), CAPIus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.4 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the second half of 2024).
