# **Special Issue**

# Synthesis and Applications of Fluorescent Carbon Dots

# Message from the Guest Editors

The journal *Organics* is pleased to announce a Special Issue entitled "Synthesis and Applications of Fluorescent Carbon Dots". Nanotechnology, particularly carbon nanomaterial science, has become increasingly recognised and significant in recent years due to the exceptional properties and versatile applications of these materials across various fields, including information technology, healthcare, environment remediation, food, and security. This Special Issue aims to highlight the latest advances in fluorescent carbon dots synthesis from different raw materials and their effect on the properties of nanomaterials, particularly how these characteristics influence their practical applications and can be used for large-scale production. Other approaches, such as nanomaterial functionalization and surface modification, which can effectively tailor the properties of carbon dots, should also be explored. The topics for publication may include, but are not restricted to, applications of fluorescent carbon dots in drug delivery technologies, (bio)sensors, biomedical imaging, environmental monitoring, security, and anti-counterfeiting.

# **About the Journal**

# Message from the Editor-in-Chief

Organics is a new open-access journal that offers rapid dissemination of innovative, informative, and impactful results in every aspect of organic chemistry, with a particular emphasis on new or significantly improved research results in the field of organic chemistry. The aim of this journal is to encourage scientists to publish their experimental and theoretical results in great detail to facilitate the advancement of organic chemistry. Sample research topics that span the journal's scope organic synthesis. synthetic methodology, are theoretical organic chemistry, physical organic chemistry. supramolecular and macromolecular chemistry, heterocyclic chemistry, organocatalysis, bioorganic chemistry, organometallic chemistry, functional organic materials, etc. We are flexible with the types of manuscripts accepted, including original research articles, short communications, highlights of new developments and insightful critical reviews.

# **Editor-in-Chief**

### Prof. Dr. Wim Dehaen

Molecular Design and Synthesis, Department of Chemistry, KU Leuven, Leuven Chem&Tech, Celestijnenlaan 200F, B-3001 Leuven, Belgium

## **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High Visibility:**

indexed within Scopus, ESCI (Web of Science), CAPlus / SciFinder, and other databases.

## **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 36.3 days after submission; acceptance to publication is undertaken in 5.2 days (median values for papers published in this journal in the first half of 2025).
