

## Special Issue

# Recent Advances in Hip and Knee Surgery

### Message from the Guest Editor

The field of hip and knee surgery has witnessed remarkable progress in recent years, driven by technological innovations, refined surgical techniques, and an evolving understanding of joint biomechanics and patient-specific needs. This Special Issue, “Recent Advances in Hip and Knee Surgery”, aims to collect high-quality original research articles, reviews, and clinical studies that explore the latest developments in this rapidly evolving area. The goal of this Special Issue is to provide orthopedic surgeons, researchers, and healthcare professionals with a comprehensive overview of current trends and future directions in hip and knee surgery. By fostering interdisciplinary dialogue and sharing evidence-based innovations, this collection seeks to contribute to the improvement of surgical outcomes, patient satisfaction, and long-term joint function in both primary and revision arthroplasty. We welcome contributions from both clinical and basic science perspectives, encouraging international collaboration and diverse methodologies that reflect the complexity and dynamism of contemporary orthopedic practice.
