

## Special Issue

# Metal-Organic Frameworks Applied in Bone Disorders

### Message from the Guest Editors

Research in metal–organic frameworks (MOFs) has changed in the last two decades, from simple crystallographic architectures to very complex new materials, ultimately redesigning the way that chemists (and scientists in general) look into traditional coordination chemistry. This rapid change has been very much motivated by the symbiotic combination of organic and inorganic components, which has allowed for the embodiment of materials with new, interesting properties. MOFs designed for medicinal and biomedical engineering applications are reported in growing numbers. From drug delivery to cancer therapy and theranostics, these biomaterials are slowly making their way to use in human health. This Special Issue will create a forum for the presentation of the most relevant progress that has been made in the aforementioned particular class of MOFs and is dedicated to the treatment, management or diagnosis of bone disorders. The Special Issue will significantly benefit from the simultaneous contribution of original research articles and pertinent, critical review articles in this scientific field.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Umile Giuseppe Longo

Department of Orthopaedic and Trauma Surgery, Università Campus  
Bio-Medico di Roma, Via Alvaro del Portillo, 00128 Rome, Italy

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.3 days after submission; acceptance to publication is undertaken in 5.6 days (median values for papers published in this journal in the first half of 2025).

##### Recognition of Reviewers

: APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
