

## Special Issue

# Beta-Decay Processes in Nuclear Systems

### Message from the Guest Editors

In this Special Issue, we would like to summarize the current status of calculations and experiments that are relevant for nuclear beta decays. In particular, we plan to review several aspects of weak decays, from the neutron to the decays of light and medium mass nuclei, and the different theoretical methods, from lattice QCD to few-body methods based in effective field theories and nuclear many-body techniques, that make it possible to achieve rigorous predictions. A crucial aspect will be to have a full understanding of the precision that present and near-future experiments will achieve, and of the systematic uncertainties in the theoretical calculations at different scales, whose control is necessary to establish nuclear beta decays as sensitive probes of physics beyond the Standard Model.

### Guest Editors

Dr. Stefano Gandolfi

Theoretical Division, Los Alamos National Laboratory, Los Alamos, NM 87545, USA

Dr. Vincenzo Cirigliano

Los Alamos National Laboratory, USA

Dr. Emanuele Mereghetti

Los Alamos National Laboratory, USA

### Deadline for manuscript submissions

closed (28 February 2022)

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Armen Sedrakian

1. Frankfurt Institute for Advanced Studies (FIAS), D-60438 Frankfurt am Main, Germany
2. Institute of Theoretical Physics, University of Wroclaw, 50-204 Wroclaw, Poland

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPIus / SciFinder, and other databases.

##### Journal Rank:

JCR - Q2 (Astronomy and Astrophysics) / CiteScore - Q2 (Nuclear and High Energy Physics)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.8 days after submission; acceptance to publication is undertaken in 4.7 days (median values for papers published in this journal in the first half of 2025).
