Message from the Guest Editor

Recent publications suggested canine distemper virus (CDV) is an emerging disease, with recent outbreaks reported worldwide in both domestic dogs and wild carnivores. The broad host range of the virus makes it difficult to control and this host range is ever expanding, with new reports of the virus infecting non-human primates and two-toed sloths. We are inviting submissions to a Pathogens special issue “Canine Distemper Virus Infection”.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
