Message from the Guest Editor

Dear Colleagues,

Monkeypox has emerged outside Africa as a cause of global concern for multiple reasons during the ongoing multicountry outbreak. During the course of this epidemic, monkeypox virus (MPXV) seems to be sexually transmitted. Its detection in sexual fluids and the epidemiological association between cases and unprotected sexual contact also suggest this.

This Special Issue is dedicated to a wide range of aspects related to Monkeypox, particularly focusing on its sexual transmission as well as studies confirming this route, its epidemiology, cases, diagnosis, therapy, prevention, surveillance, and molecular and genomic aspects, among others.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
