Message from the Guest Editor

This Special Issue will focus on the current vaccine strategies used against PED across the world. There are many different commercialized PED vaccines available on the market, but the PED situation remains endemic in some countries. Additionally, the vaccine programs are very different from country to country, and from farm to farm. We need to clarify the efficacy of vaccines and determine which programs are best for addressing this economically important pathogen, discussing PED vaccines and vaccination programs in detail.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
