## Special Issue

# Computational Approaches in Mechanisms of Pathogenesis

## Message from the Guest Editor

Computational biology approaches are becoming popular and are at the forefront of theoretical and experimental biology. They provide a novel way of looking at complex biological problems and provide unique insights that are often unobtainable using other approaches: computational approaches have become an integral part of a biologist's toolkit in framing new questions, formulating rational experimental designs and aiding the analysis of experimental results. Thus, the development of these tools has influenced and radically evolved all biological sciences. In this special edition of Pathogens, we focus on computational approaches that can lead to obtaining novel insights into pathogenic mechanisms. I would like to invite colleagues investigating mechanisms of pathogenesis using in silico approaches alone or in combination with experimental findings to submit their manuscripts to this Special Issue in the form of original research and reviews.

## **About the Journal**

## Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

## **Editor-in-Chief**

Prof. Dr. Hinh Ly

Department of Veterinary and Biomedical Sciences, College of Veterinary Medicine, University of Minnesota, Saint Paul, MN 55108, USA

## **Author Benefits**

## **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS. and other databases.

### **Journal Rank:**

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
