

## Special Issue

# Parasitic Helminths and Control Strategies

### Message from the Guest Editors

This Special Issue of *Pathogens* aims to collect current information on parasitic helminths and control strategies in animals and humans. Helminthosis represents a global problem that is commonly addressed under the umbrella of neglected tropical diseases and has not only been attributed to financial losses, but also to losses caused by damage to animal and human health. This is very important under the concept of “One Health” and the relationship with the zoonotic aspects that involve the various diseases caused by helminths. The collection of data is necessary with the use of biotechnological or customary tools to establish the updated prevalence, which is important to determine the reality of each location and can indicate whether the control measures adopted are effective or even whether the unprecedented reports may indicate the growth of one of these agents. Among the advances for the control strategies of helminthosis are biological control, vaccines, resistant breeds, nanotechnology, chemicals, and even new phytotherapeutic anthelmintics. We, therefore, invite our colleagues to send in their work so that we can fulfil this objective.

## About the Journal

### Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

*Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
