

## Special Issue

# Classic and Emerging Pathogens as a Cause of Healthcare-Associated Infections: Current Knowledge and Future Approaches

### Message from the Guest Editors

Healthcare-associated infections (HAIs) are currently one of the most important public health challenges worldwide. It is estimated that in Europe, 6.5% of patients admitted to an acute care hospital develop an HAI. Moreover, there is growing concern within the scientific community regarding the increasingly widespread and consistent phenomenon of antibiotic resistance. Indeed, microorganisms have gradually developed resistance mechanisms against almost all of the available antibiotics. Specifically, besides classic pathogens already known and studied for a long time, so-called 'ESCAPE' microorganisms, new pathogens, such as *Candida auris* and other new bacteria, are also spreading worldwide. Current strategies to fight this crucial public health issue especially involve active surveillance, good practices in healthcare, and antimicrobial stewardship. In this perspective, the present Special Issue aims to collect high-quality, rigorous scientific papers in order to summarize the current knowledge on this pressing public health challenge.

## About the Journal

### Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

*Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
