

# Special Issue

## Malaria in a Changing World

### Message from the Guest Editors

This Special Issue aims to highlight interdisciplinary and critical perspectives that examine how malaria adapts to new ecologies, migrates across geopolitical boundaries, and interacts with global inequalities. We welcome contributions that explore emerging themes such as the impact of climate variability on vector ecology; the consequences of conflict and displacement on malaria resurgence; innovations in vaccine and vector control technologies; and the role of health systems and community engagement in sustaining progress. Equally important are investigations into the social, historical, and political contexts that shape malaria research, policy, and practice especially in low- and middle-income countries.

As we face new planetary, technological, and ethical frontiers, this Special Issue seeks to reimagine malaria not only as a biomedical problem but as a complex, evolving phenomenon embedded in broader global transformations. We invite original research articles, reviews, case studies, and commentaries that interrogate and illuminate malaria in this changing world.

## About the Journal

### Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

*Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
