

Special Issue

Chlamydia trachomatis Infections

Message from the Guest Editors

Chlamydia trachomatis is the most common sexually transmitted infection and is the leading cause of preventable blindness. Many important questions remain about the natural history of *C. trachomatis* infections, disease progression, epidemiology, and effective disease control strategies. This Special issue is dedicated to *C. trachomatis* related pathology and epidemiology. Submissions from researchers investigating *C. trachomatis* infections and outcomes are welcome. The aim is to provide state-of-the-art summaries of current knowledge and explore emerging developments in the understanding of the pathogen, the infection, or their global impact. We look forward to your contribution.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief
