

Special Issue

Understanding the Dynamics of HIV Reservoirs Is Fundamental for Finding a Potential HIV Cure

Message from the Guest Editors

This Special Issue of the *Pathogens* journal is intended to cover all aspects of the dynamics of the HIV reservoir—from the establishment of the early pool of HIV latently infected cells to the mechanisms governing maintenance and reactivation, as well as state-of-the-art curative approaches for HIV eradication. We welcome short and full length original research articles, as well as reviews. We look forward to your contributions.

Guest Editors

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Prof. Dr. Hinh Ly

Department of Veterinary & Biomedical Sciences, University of Minnesota, Twin Cities, MN, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
