## Intestinal Parasites Infection

### Message from the Guest Editor

Intestinal parasitic infections are among the most common infections, affecting approximately 3.5 billion people and causing over 450 million ill health problems annually. Over the last several years, we have seen new approaches to the diagnosis, treatment, and prevention of intestinal protozoan parasites. However, the diagnosis and treatment of intestinal helminth infections have not changed much, and the traditional microscopic method can be used for their diagnosis. The aim of this Special Issue is to place special emphasis on basic and translational research on intestinal parasite infection. We welcome your intriguing research findings in the upcoming Special Issue on “Intestinal Parasite Infection” by *Pathogens* as a valuable contribution to the global scientific community.

## About the Journal

### Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

*Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
