Metabolism for Parasitism

Message from the Guest Editors

Metabolism in parasites and the metabolic interplays between parasites and their hosts are important for the survival of parasites and the establishment of parasitism. Key molecules such as essential enzymes and regulators are also common targets in the development of antiparasitic therapeutics. Here we call for original research articles reporting new findings, as well as review articles summarizing recent progresses, on the molecules involved in the metabolism in parasites or in their hosts in response to parasitic infections.

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Veterinary Medicine, University of Minnesota, Saint Paul, MN 55108,
USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
