One Health Perspectives on Foodborne Pathogens: Evolution, Resistance, and Prevention—2nd Edition

Message from the Guest Editors

The One Health approach addresses foodborne pathogens by integrating human, animal, and environmental health perspectives to enhance public health outcomes. This framework acknowledges that foodborne pathogens, such as Salmonella and Campylobacter, circulate across these interconnected domains, evolving through gene transfer and adapting to antimicrobial agents used in agriculture and medicine. Antimicrobial resistance (AMR) in these pathogens poses a significant threat, as resistant strains can spread between animals, humans, and environments, complicating treatment efforts and exacerbating health risks. By adopting a One Health perspective, researchers and policymakers aim to monitor and mitigate AMR and pathogen transmission through coordinated surveillance, safer agricultural practices, and targeted interventions. This comprehensive view highlights the need for cross-sector collaboration to address food safety, develop effective prevention strategies, and ensure sustainable approaches to antimicrobial use.

Guest Editors

Dr. Daniel F. M. Monte

Department of Population Health and Pathobiology, College of Veterinary Medicine, North Carolina State University, CVM Research Building RM 472, 1051 William Moore Dr., Raleigh, NC 27607, USA

Dr. Julia Memrava Cabrera

Department of Agricultural and Environmental Biotechnology, Faculty of Agricultural and Veterinary Sciences, Sao Paulo State University, Jaboticabal, Brazil

Deadline for manuscript submissions

31 July 2027

About the Journal

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

Pathogens is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Editor-in-Chief

Prof. Dr. Moriya Tsuji

School of Engineering Medicine, Texas A&M University, 2121 West
Holcombe Blvd., Suite 1007, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
