

## Special Issue

# Prevalence and Antimicrobial Resistance of Foodborne Pathogens

### Message from the Guest Editors

The overall focus and scope of this Special Issue will highlight the assessment of the prevalence and antimicrobial resistance of foodborne pathogens associated with fresh and value-added products obtained via different marketing venues. The purpose of the Special Issue is for researchers and educators to use this information to develop and disseminate food safety and hygiene awareness training and educational programs for stakeholders, including producers, processors, vendors, store managers, and consumers worldwide. In addition, this information will contribute to awareness by food producers and consumers and will translate into the judicious and careful use of antimicrobials in human and agricultural practices to help reduce the development of multi-drug-resistant bacteria.

## About the Journal

### Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics.

*Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Infectious Diseases)
